As a professional photographer and an illustrator, I needed a speedier editor. Photoshop was an obvious choice. In many ways, it's the best choice in my industry to date. I enjoy writing appears on its type tools, such as the Ink Brushes. I've bought several people's graphic designs because I could make a fast tweak to make them my own. Of course, you do need to learn a great deal about using Photoshop to get the best results, as well as to avoid productivity-killers. In my experience, once you grow comfortable with its concepts and workflow, there are no secrets. But if you haven't worked with this program before, you might find the workflow a little counterintuitive at first. Photoshop has a huge advantage over other editors with regard to the speed with which you can preview images. You can see changes as you make them. For example, you can quickly apply an adjustment to one area of a photo, then decide you don't like the way it looks. You can edit the photo without having to retake the shot. I enjoy using many of the same features that photographers love, including the ability to move easily between normal and artistic views of the same image. For illustrators, the adjustments that bring about various page design effects are great fun to play with. But maybe, the most valuable feature of Adobe Photoshop is the ease with which you can open and save files. This program is so fast that you can open a file in your system, add or remove layers, and then save it within minutes. Photoshop doesn't restrict your creativity, nor does it make you feel like you're doing something wrong.

The DC update impacts a small number of Adobe Camera Raw customers. We're providing a revised installer for Adobe Camera Raw 9.10.5 (available through the App Store and Google Play) to work around the update. If you have issues downloading the new version, please try again. If you use the `Smart Preview` feature with your camera, and set it to `Copy to Photoshop` it might lead to unexpected results. This is because the `Smart Preview` feature returns a high-dynamic-range preview that is created through using the camera's auto white balance. To avoid this issue, set the `Smart Preview` to `Display in Photoshop` and when you're done, select `Save Panorama` to correct the white balance of the preview. We have long defined and supported a strategy to work with leading smartphone and tablet manufacturers to incorporate Adobe features directly into their hardware. This has helped us collaborate more closely with our partners on native camera features for a more integrated experience that better leverages what a user is doing with their device during camera shooting. Please note that not all phones will have these features. Adobe has also been working closely with certain smartphone manufacturers to take advantage of native camera features. Adobe's latest Camera app — with its powerful, new camera user interface, improvements to Photo Adjust, and AutoSmart modes — brings together all three of those efforts. e3d0a04c9c
